

Upgrading an EBS Database to 12c with a Platform Change

Session ID: 10393

Prepared by:

Michael Brown

BlueStar

mbrown@bluestarinc.com

Who Am I

- Over 21 years experience with Oracle Database
- Over 18 years experience with E-Business Suite
- Chair, OAUG Database SIG
- Co-Founder AppsPerf
- Oracle ACE  ORACLE ACE
- OAUG Member of the Year 2013
- Applications DBA, BlueStar 

REMEMBER: Check in on the COLLABORATE Mobile App

Agenda

- Upgrade
- Platform Migrations
- Datapump
- Transportable Tablespaces
- Case Study

COLLABORATE 16
REINVENTING THE WAY WE COLLABORATE
AND THE WORLD WE LIVE IN

REMEMBER: Check in on the COLLABORATE Mobile App

How many are on EBS 12.2, 12.1, 12.0, 11.5.10.2, earlier?

How many are on 12.1 (if any 12.1.0.2), 11.2.0.4, 11.2, 11.1, earlier?

Assumptions

- Same Application Tier before and after the upgrade

The logo for COLLABORATE 16 is located in the top right corner. It features a circular icon with three stylized human figures in blue and green. Below the icon, the text "COLLABORATE 16" is written in a bold, sans-serif font. Underneath that, in a smaller font, is the tagline "REIMAGINING THE WAY WE WORK TOGETHER". To the left of the logo, three vertical arrows of increasing height (light blue, dark blue, and green) point upwards, symbolizing growth or progression.

REMEMBER: Check in on the COLLABORATE Mobile App

Information on changing the applications tier can be found in MOS Notes **438086.1**

Upgrade

- Can be done as part of the platform change
- Still will need the key documents
 - Interoperability
 - 11.5.10.2 1524399.1
 - 12.0/12.1 1930134.1
 - 12.2 1926201.1
 - AutoConfig
 - Initialization Parameters
 - 11.5.10.2 216205.1
 - 12.x 396009.1
 - Database Documents
 - Upgrade Manual
 - Release Notes
 - Platform Specific Release Notes

REMEMBER: Check in on the COLLABORATE Mobile App

Autoconfig, Initialization note numbers will be found in the interoperability note.
Make sure to pay attention to platform specific initialization parameters

Platform Migrations

- Three main types for the database
 - OS upgrade on the same platform
 - Example: Oracle Enterprise Linux 5 to Oracle Enterprise Linux 7
 - Change in platform of the same endian-ness
 - Change in platform of different endian-ness

REMEMBER: Check in on the COLLABORATE Mobile App

Endian

- How is 0xaf178c4b stored in memory (or a binary file)
 - Big Endian
 - Most Significant Bytes first
 - Byte A: AF
 - Byte A+1: 17
 - Byte A+2: 8C
 - Byte A+3: 4B

REMEMBER: Check in on the COLLABORATE Mobile App

Endian

- How is 0xaf178c4b stored in memory (or a binary file)
 - Little Endian
 - Least Significant Bytes first
 - Byte A: 4B
 - Byte A+1: 8C
 - Byte A+2: 17
 - Byte A+3: AF

REMEMBER: Check in on the COLLABORATE Mobile App

Endian

- How is 0xaf178c4b stored in memory (or a binary file)
 - Mixed Endian
 - Byte and Word order are different
 - Byte A: 8C
 - Byte A+1: 4B
 - Byte A+2: AF
 - Byte A+3: 17

REMEMBER: Check in on the COLLABORATE Mobile App

Mentioned for completeness, but rare and I don't believe is used by any certified EBS/DB platforms

Endian

- Big Endian
 - Solaris on SPARC
 - HP-UX on Itanium and PA-RISC
 - AIX on POWER Systems
 - Linux on System z
 - Linux on POWER Systems
- Little Endian
 - Linux x86/x86-64
 - Solaris on x86-64
 - Linux Itanium
 - HP Tru64 and OpenVMS Alpha
 - Windows Server x86/x64/Itanium

REMEMBER: Check in on the COLLABORATE Mobile App

OS Upgrade

- Upgrade and Clone
- Clone and Upgrade
- If it is too many versions, complete as a same endian upgrade

REMEMBER: Check in on the COLLABORATE Mobile App

Same Endian

- Transportable Database
 - Does not support Upgrade
 - Basically a datafile copy and rman convert
- Data Pump

REMEMBER: Check in on the COLLABORATE Mobile App

Different Endian

- Datapump (DP)
 - 11.5.10.2 1585257.1
 - Source must be at least 10.2
 - 12.0/12.1 741818.1
 - Source must be at least 10.2
 - 12.2 1926203.1
 - Source must be at least 11.2

REMEMBER: Check in on the COLLABORATE Mobile App

Different Endian

- Transportable Tablespaces (XTTS)
 - Requires a controlled release patch
 - 12.0/12.1 to 12c 1945814.1
 - Source RDBMS 11.2 for 12.0.6/12.1.3
 - Source RDBMS 12.1 for 12.1.3
 - 11.5.10.2 1366265.1
 - Source 10.2 or Higher
 - Target 11.2

REMEMBER: Check in on the COLLABORATE Mobile App

Data pump is safer

11.5.10.2 means multi step process, use data pump

Oracle support strongly encourages data pump, they must be convinced to give the controlled release patch.

Datapump

- Easiest method
- Takes longest
 - Serial, Full export followed by full import
- Safest

REMEMBER: Check in on the COLLABORATE Mobile App

Transportable Tablespaces

- Cannot change Character Set or National Character Set
- Transparent Data Encryption (TDE) is not supported
- Mixing RDBMS and EBS schemas in the same tablespace is not supported
 - For example, CTSYS needs to be separate from EBS schemas

REMEMBER: Check in on the COLLABORATE Mobile App

Transportable Tablespaces

- Required patch is controlled release
 - This is not a rubber stamp, Oracle will make the decision on whether to give it to you.

REMEMBER: Check in on the COLLABORATE Mobile App

Platform Migration

- Assumptions: EBS 12.1.3, RDBMS 11.2
- Prepare the Source
 - Apply 12c prerequisites
 - Section 1, Steps 1 and 2 from Interoperability Notes
 - Interoperability patches and autoconfig
 - Apply the consolidated export/import utility patch
 - 16541956 (dp), 20863688 (xtts, **CONTROLLED RELEASE**)

REMEMBER: Check in on the COLLABORATE Mobile App

Keep interoperability notes open, I have seen missing steps in both DP and XTTS

Platform Migration

- Create a working directory for datapump
 - Example, /u01/app/oracle/expimp
 - Make sure it is big enough

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Source - XTTS

- Create transport_set_violations table
 - `dbms_tts.transport_set_check('TABLESPACE')`
- auxttspre.sql from export/import patch
 - Creates all the scripts

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Source-DP

- Create the database creation script for the target
 - `sqlplus system`
 `@$AU_TOP/patch/115/sql/auclondb.sql 11`

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Source

- As sysdba, run auque1.sql to record the Advanced Queue settings
- Remove rebuild index parameters in spatial indexes
 - Select * from dba_indexes where index_type='DOMAIN' and upper(parameters) like '%REBUILD%';
 - If any, ALTER INDEX *index_name* REBUILD PARAMETERS *parameters without rebuild_index*;

REMINER: Check in on the COLLABORATE Mobile App

Prep the Source

- Synchronize Text Indexes
 - Select pnd_index_owner, pnd_index_name, count(*)
from ctxsys.ctx_pending group by
pnd_index_owner,pnd_index_name;
 - If any
 - Exec ctx_ddl.sync_index('Index Owner','Index Name')

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Target

- Perform the steps in the Database Installation section of the Interoperability Notes
 - Install 12.1.0.2 Database software
 - Install 12.1.0.2 Examples
 - Create nls/data/9idata
 - Apply required 12.1.0.2 one off patches

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Target

- On windows, fix sqlnet.ora
 - `SQLNET.AUTHENTICATION_SERVICES=(NTS)`
- Create the initialization and CBO parameter files using note 396009.1
 - Do not user PL/SQL native compilation
 - Do not set `LOCAL_LISTENER`
- Create a working directory for expimp

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Target

- Create the target database
 - Copy aucrdb.sql from the source to the target system
 - sqlplus / as sysdba
 - spool aucrdb.log
 - @aucrdb.sql
 - spool off
 - exit
- If the source is natively compiled, set up for native compilation on the target

REMEMBER: Check in on the COLLABORATE Mobile App

You cannot switch between native and interpreted pl/sql during the migration

Prep the Target

- Copy the database preparation scripts to the target, read the remarks in each script
- Setup SYS
 - audb1210.sql
- Set up SYSTEM
 - asy1210.sql
- Install JVM
 - aujv1210.sql
 - This script can not be rerun

REMEMBER: Check in on the COLLABORATE Mobile App

Copy them to the working directory

Prep the Target

- Install other required components
 - aumsc1210.sql SYSAUX TEMP
- Install custom components
 - Select * from dba_registry
- Run post install steps from the 12.1.0.2 patches

REMEMBER: Check in on the COLLABORATE Mobile App

Prep the Target

- CTXSYS
 - `ctxsys.ctx_adm_set_parameter('file_access_role', 'public')`
- Disable automatic statistics gathering
 - Copy `$APPL_TOP/admin/adstats.sql` to the target database server
 - In a restricted session, run `adstats.sql`
- Take a backup

REMEMBER: Check in on the COLLABORATE Mobile App

Export

- XTTS-Database Objects
- DP-Database
- Modify the export parameter file
 - DP: auexpdp.dat
 - XTTS: auexpcall.dat, auexpcallclean.dat, auexptts.dat, auexpmsc.dat, auexpsys.dat
- Create a directory for datapump
 - create directory dmpdir as '/u01/app/oracle/expimp';

REMARK: Check in on the COLLABORATE Mobile App

XTTS v DP is metadata v data unless your metadata is significantly larger, use DP

Export

- Shutdown the apps tier processes
- Disable Database Vault
- Purge the recycle bin
 - Purge dba_recyclebin;
- Grant EXEMPT ACCESS POLICY to system
- Remove MGDSYS
 - @?/rdbms/admin/catnomgdidcode.sql

COLLABORATE 16

REMEMBER: Check in on the COLLABORATE Mobile App

If the source DB is being kept as a backup or will still be used for other reasons, after exporting run catmgdidcode.sql

Export

- Follow steps 1-3 in note 352306.1 to export the OLAP analytical workspaces
- For performance reasons, you may drop the XLA packages and re-create after import

REMARK: Check in on the COLLABORATE Mobile App

Export DP

- expdp system parfile=*export parameter file*
- Copy the dump files to the target system
- revoke EXEMPT ACCESS POLICY from system
- Re-create XLA packages
- Enable Database Vault
- Shutdown

REMEMBER: Check in on the COLLABORATE Mobile App

Export-XTTS

- expdp system parfile=auexpcall.dat
 - Ignore ORA-39168 errors
- Mark the tablespaces read only
 - auxstsread.sql
- The following can be run in parallel
 - expdp system parfile=auexppts.dat
 - expdp system parfile=auexpsys.dat
 - expdp system parfile=auexpglb.dat
 - expdp system parfile=auexpmsc.dat

REMEMBER: Check in on the COLLABORATE Mobile App

Export-XTTS

- Copy the export dump files and data files to the target system
- Revoke EXEMPT ACCESS POLICY from system
- Convert back to read write
 - auxttwrite.sql
- Convert callout data back to metadata
 - expdp system parfile=auexpccallclean.dat

REMEMBER: Check in on the COLLABORATE Mobile App

Export XTTS

- Recreate XLA packages
- Enable Database Vault
- Shutdown the database

REMEMBER: Check in on the COLLABORATE Mobile App

Import-DP

- Copy auimpdp.dat and aufullimp.dat from \$AU_TOP/patch/115/import to the target system
- On the target system
 - Create directory dmpdir as '/u01/app/oracle/expimp';
- impdp system parfile=auimpdp.dat
- Follow step 7 from note 352306.1 to import the OLAP analytical workspaces
- Revoke EXEMPT ACCESS POLICY from system

REMARK: Check in on the COLLABORATE Mobile App

Import-XTTS

- Copy the import files from the source
 - auimpxtts.dat, auimpmsc1.dat, auimpmsc2.dat, auimpsys.dat
- Create directory dmpdir as '/u01/app/oracle/expimp';
- rman target / @aurman.dat
 - Converts endian
- Impdp system parfile=auimpmsc1.sql
 - Ignore ORA-39168

REMARK: Check in on the COLLABORATE Mobile App

Import-XTTS

- Impdp system parfile=auimpxtts.dat
- Modify tablespaces to read write
 - @auxttswrite.sql
- Impdp system parfile=auimpglb.dat
- Impdp system parfile=auimpmsc2.dat
- Impdp system parfile=auimpsys.dat

REMEMBER: Check in on the COLLABORATE Mobile App

Import-XTTS

- Follow step 7 from note 352306.1 to import the OLAP analytical workspaces
- Revoke EXEMPT ACCESS POLICY from system
- Expdp system parfile=auexpcallclean.dat

REMEMBER: Check in on the COLLABORATE Mobile App

Update the Target

- Reset Advanced Queues
 - @auque2.sql
- Start the new listener
- Adgrants.sql
- Adctxprv.sql *system_password* CTXSYS
- If target is windows and source was not, apply 6494466
- In restricted session, adstats.sql

REMEMBER: Check in on the COLLABORATE Mobile App

Update the target

- Fnd_conc_clone.setup_clean
- Implement Autoconfig
- Apply WMS patches
 - 8796558, 18039691
- Recreate database links
- Create ConText and AZ objects
- \$AU_TOP/patch/115/bin/dpost_imp.pl *driver* 11
 - Apply the generated file with adpatch

REMEMBER: Check in on the COLLABORATE Mobile App

Update the Target

- `lcx_cat_sqe_pvt.sysnc_sqes_for_all_zones`
- Use `utlrp.sql` to compile all invalid objects
- Re-create XLA packages if they were dropped
 - `@xla6128278.sql`
- Run Autoconfig on the apps admin node

REMEMBER: Check in on the COLLABORATE Mobile App

Update the Target

- Adadmin
 - Compile flexfields
 - Recreate grants and synonyms
- Start the apps tier
- Create DQM indexes

REMEMBER: Check in on the COLLABORATE Mobile App

COLLABORATE 16

MEMBERSHIP AND LEADERSHIP DEVELOPMENT
FOR THE FUTURE
